

Java Learn Build Instructions

1. In GitHub -> Click on the green “clone or download” button and copy the link for the SSH option.
2. Open up IntelliJ or Android Studio
3. Go to “Checkout from version control” and select Git. (IntelliJ) or Go to “Check out project from Version Control” and select Git (Android Studio)
4. In the URL section, paste or (Ctrl + v) the SSH link from the repository and click “Clone”.
5. When prompted to Open the project, click “No”.
6. From the currently opened project go to File -> New -> Project from existing sources and select the project directory that you just cloned.
7. When the dialog pops up, make sure that Gradle is selected and hit “next”.
8. Make sure “Enable Auto-Import” is selected and click finish.
9. The build will automatically synchronize as it opens.
10. Click the green run button (green triangle in top right corner) to execute the build.
